

## INSPECTIONS AND EXPEDITING

INSPECTA offers a complete and integrated range of services, including inspections, expediting and consulting, counting on a global network of qualified personnel covering all disciplines including Mechanical, Electrical and Instrumentation, Rotating Equipment, Static Equipment, Civil Structure, Shipping, Coating and Painting.

A dedicated professional team follows the whole project from our premises, coordinating and monitoring all phases of suppliers' qualification, engineering, procurement, fabrication and delivery processes on customers' demand with visits scheduling at vendors' and sub-vendors' site, desk-expediting and regular follow-up and reporting.

According to an internal reporting procedure qualified according to ISO 9001 -2008 edition, we provide information and documentation on a regular basis on what is performed during the inspections and expediting visits in order to keep the client updated with a proactive attitude to problem solving that enhance effective operations to ensure that materials and equipment are delivered on time and to reduce risks and operating costs.

For critical equipment or projects, thanks to a database of duly selected technicians spread around the world, we can provide local response to clients' needs, both for spot inspections and for full-time assignments, even on a short notice.

Our technical services include pre-inspection meetings, intermediate and final inspections, review of documentation before and during fabrication or manufacturing processes, follow-up of contractor's compliance with client's requirements and specifications, providing all the necessary information, documentation and instructions for vendor and sub-vendor's personnel.

### Worldwide Services List:

- **Inspections, expediting and desk-expediting for :**
  - construction and erection of structural parts;
  - instrumentation and automation systems;
  - electrical and electronic systems;
  - sealine and pipeline fabrication and installations;
  - equipments as: heat exchangers, pressure vessel, tanks, valves, etc. ;
  - rotating equipment as:turbines, compressors, pumps, etc.
  - pipe mills manufacturing;
  - manufacturing of insulated or coated pipe in pipe systems;
  - construction and testing of hydraulic and electrical umbilical.
  
- **Lead Auditors for:**
  - QA audits;
  - internal QC audits;
  - vendors assestment;
  - vendor QA verification and qualification

◦ **QC Coordination and Inspections for mechanical, electrical and instrumental fields for:**

- non-destructive testing;
- destructive testing;
- welding inspections and supervision;
- painting and coating;
- environmental and safety;
- hydraulic tests;
- visual and dimensional tests
- approval of project documentation for construction, welding painting and coating.
